Notes

- The Wawatay Western keyboard layout can be used for the following: Oji-Cree, Eastern Swampy Cree, and some dialects of Northern Ojibway.
- The Wawatay Eastern keyboard layout can be used for the following: Moose Cree (if using ᑖ as the y-final), and some dialects of Northern Ojibway.
- In the maps above, the character on the left side of a key is unshifted. The character on the right side is shifted. The character ᖃ is typed with the q key. To type ᖐ hold down the shift key and then type q.
- Accents which appear above a syllable are typed after the base character. Accents which appear before a syllable are typed before the base character.
- To type the long vowel dot accent ' use the Apostrophe key ' — ᖕ is typed 8 then '.
- The Cree w-dot, as in ᖄ, functions like an accent key. It must be followed by a syllabic character, otherwise the key will not do anything. Because the dot is tied by pronunciation to a full syllable, w-dot plus syllable counts as one character. To type the w-dot use the a key — ᖋ is typed a then 8.
- There are two types of hyphen. The single hyphen - (used with eastern finals) and the syllabics hyphen ᖇ (used with western finals). To type the syllabics hyphen use the hyphen key -.
- When the CAPS-LOCK is turned on, the keyboard reverts to a US English layout.
